Kahoot

- https://kahoot.com/
- A game-based response system. Teachers use Kahoot in the classroom to create quizzes. The teachers receive an immediate response from the students.
- I will use Kahoot to review the material at the end of the day.

The Queue

- https://letsrecap.com/queue/
- This tool is very similar to Twitter, but it is designed for educational purposes. The teacher will post questions and the students answer via text or video.
- I will use the Queue to introduce a new topic. I plan to use it as a "bell ringer", to keep the students busy while I get ready to start class. The Queue is also a really great tool to use when school is cancelled such as during snow days. It will allow to connect with the students and not completely let a day go to waste.

Blibionasium

- https://www.biblionasium.com/#tab/content-popular-series
- Blibionasium is a digital book club. Students can find books other children recommend and are encouraged to read. Teachers can keep track of the books students have read or are interested in reading.
- I will use this tool to encourage my students to read and feel connected to other students by recommending each other books. I would like my students to use this tool to find books they are willing to read and to challenge them to become better readers. To look for books in the next reading level.
