Padlet

Padlet is a fun tool to use. It can be used to display resources for students when writing a paper. To recommend appropriate books for students. Teachers can create a board and post a topic and students can add to it with their own opinions. Their opinions can be in words, pictures, etc. A board can be created for students to submit a presentation, paper, etc. A teacher can create a board to give students examples of something specific such as the expectations of a project. Teachers can create a board to see what students want to learn or what their interests are. There are many uses for Padlet.

On-Line Tools

On-Line tools make it easier to engage students in their learning. Technology is all around us and it becomes more important as time passes. It is important for students to know how to use technology to learn. I like on-line tools because it allows teachers and students to remain connected outside of class. It also is another type of instruction students enjoy. There are so many different tools that can be used in the classroom to enhance the curriculum. Some ways are by creating videos, having digital discussions, allowing students to share their thoughts through more than written words, etc.
