
Brainpop

Version: 3.1.9

Publisher: BrainPOP

Target Audience: The app is designed for users 4+ but the material is made for ages 9-11.

Curriculum: The app covers science, social studies, English, math, art & music, health, and engineering & tech.

Cost: The app is free to download but has very limited features. To use a bulk of the material on the app you have to subscribe and pay. The user can subscribe to Brainpop Explorer for \$2.99 per month or subscribe to Brainpop Full Access for \$6.99 per month.

Description of Software: The software is very simple and easy to navigate for ages 4+. There is science, social studies, English, math, arts & music, health and tech tabs. Each tab has multiple topics with a video and a quiz to go along with it. On the free app, each tab only comes with 3 videos and 3 quizzes. So the free app only comes with 21 free videos and quizzes.

Impressions of Software: The software was easy to navigate and understand. The material will be very helpful for specific lessons but can't be used often because of the limited amount of access. If you subscribed to use the app and had full access the app would be very useful in everyday lessons. I was impressed with how much material this app covered but very disappointed with how little you can view on the free version.

Does it Pass?: This software passes the evaluation, it covers development and learning needs of a wide variety of users. The app is user-friendly and is simple enough for children to use.
