# Hopscotch

---

**Version:** 3.33.6

**Publisher:** Hopscotch Technologies

**Target Audience:** 4+, Made for Ages 9-11

**Curriculum:** This app is used to help ages 9-11 learn to code.

**Cost:** Free to download, 1 month subscription \$7.99, 1 year subscription \$79.99

**Description of Software:** The app allows users to create and play different games to help them learn how to code. The software allows users to create their own games, stories, etc. and publish them. The user also gets to play on other users projects they made.

**Impressions of Software:** We didn't know much about coding before this so it was confusing to figure out the app at first. Creating a game was harder than expected on this app and playing others games got pretty tough at times too. It took us some time to figure out this app, which worries me with how the students would do with it.

**Does it pass?** Yes, it does pass
