
IXL

Version: 4.2.1

Publisher: IXL Learning

Target Audience: 4+

Curriculum: This app covers Pre-K through 8th grade Math and Language Arts. It covers learning to count to 3 all the way up to calculus problems for more advanced math lessons. It covers finding an uppercase letter to Greek and Latin roots for 12th graders. This app covers a large variety of curriculum in math and language arts.

Cost: Free to download with limitations. In-App purchase of \$19.99. There is a family, classroom or school plan that the user can purchase, prices vary.

Description of Software: The user selects a subject, math or language arts. Then the user selects a grade level, Pre-K through 8th grade for math or Pre-K through 12th grade for language arts. After the subject and grade are selected, the user has different topics such as counting, patterns, money, etc. to choose quizzes from.

Impressions of Software: I love this app because there are so many different topics that the user can learn through. The quizzes are interactive and very useful in the classroom. The free version limits all of the quizzes so the parent, teacher or school would almost have to purchase the app. It allows you to take all of the quizzes but cuts the quizzes off in the middle of them if the user has the free version.

Does it pass? Yes, the app can be a useful tool for students to learn from.
