
Solar Walk

Version: 2.6.4

Publisher: Vito Technology Inc.

Target Audience: 4+

Curriculum: This app would cover a wide variety of science lessons. The app allows the users to learn different information as they navigate through the solar system.

Cost: Free to download with no In-App purchases.

Description of Software: The software shows an overview of our solar system. If the user zooms all the way out, they can see where our solar system is located in the milky way. The user can zoom in a little farther and see a detailed view of each planet in our solar system. For example, the user can zoom in on Saturn and see all of Saturn's satellites orbiting around the planet. The user can click on Saturn and get general information on it, figures, internal structure, a photo gallery and a Wikipedia page with information pops up. The user can do this with all planets, moons and satellites.

Impressions of Software: The app is very easy to work with. It has a simple layout but provides so much detail for the user to learn from. We are very

impressed with the app and how much we could do with this app on several different lessons.

Does it pass? Yes, it passes
