The Water Cycle

1. Draw a diagram of the water cycle:

2. Briefly explain each step of the water cycle:

- **Precipitation:** This is when water (in the form of rain, snow, hail or sleet) falls from clouds in the sky.

- **Condensation:** This is when water vapour in the air cools down and turns back into liquid water.

- **Evaporation:** This is when the warmth from the sun causes water from oceans, lakes, streams, ice, and soils to rise into the air and turn into water vapour (gas). Water vapour droplets join together to make clouds.
