

Mini Lesson 1 (Animal Information Scavenger Hunt)

- Grade level/ Audience: 1st Grade Students
- Curriculum: Science
- Tools: QR Code Reader app/iPad and YouTube
- Synopsis: Students will watch a YouTube video about different animals in their different habitats. Students will then use a QR code reader app on an iPad to follow the QR codes that the teacher makes for them. There will be different codes that go to websites with information about all of the different kinds of animals such as reptiles, amphibians, insects, etc. This will be kind of like a scavenger hunt almost. The teacher will create a worksheet for the students to fill out as they look at the different websites via the QR codes. The students will fill in the blanks on the sheet as they find them. Students will do this project in pairs so that one person can write while the other person searches, but both of the students learn in this situation.
