

Mini Lesson 2 (Animals and Their Ecosystems)

- Grade level/ Audience: 1st Grade Students
- Curriculum: Science
- Tools: FunBrain (Coral Reef game) and Google Docs
- Synopsis: Students will do this project in groups. Students will play the coral reef game on FunBrain as groups and then collaboratively write a report/essay on what they learned about these animals in their ecosystem(s) in a Google Docs document. Each student will watch no matter if they are the one answering the question or not. Students will take turns answering the questions in the game. Students will then each choose something separate to talk about in their group paper (i.e., sharks, shrimp, and plants). The students will all write/type on their groups Google document at the same time.
