Mini Lesson 5 (Beebot and His Math Directions)

- Grade level/ Audience: 1st Grade Students

- Curriculum: Math

- Tools: Beebot and Quizlet

- Synopsis: Students will look at the Quizlet with the math direction questions. A math direction question would be a multiple choice question such as, "If Billy took 3 steps forward and 5 steps backward, how many steps is Billy from where he started?". Students will choose to take a test over this Quizlet. Then, the students will model the questions with Beebot to find the answer to the questions. For the example above, the groups would have Beebot take 3 steps forward and 5 steps backward while marking his original location and his final location. The students will work in groups to do this and each student would take turns using Beebot to answer the Quizlet questions.
