

## PADLET

Padlet can be used several ways in the classroom. Padlet can be used by teachers to create web quests for students, have all of their lesson plan materials in one place, have all of their lesson plans in one place, and for questions from parents/community members. Padlet can be used by students to create research projects, to collaborate ideas between people via the internet, to vote on things, to comment on things, to post pictures, and to communicate in a friendly way due to the kid friendly option.

## **On-Line Tools**

On-line tools are very useful and a lot of them are extremely useful for educational purposes. There are many on-line tools that are free, easy to use, and even educational. Students can access and use most of them with no problems. Teachers can typically monitor children easily on most on-line tools. Most on-line tools have a history button, such as Google Drive, where teachers can see all of the changes that students make to documents. On-line tools can be used in certain lessons for making presentations/slideshows, creating documents, and testing/quizzing students over information. Students seem much more enthused about doing work when it involves some sort of technology. I like that most on-line tools allow teachers to see what students have done to the projects. I also like that they are free and easy to access for students and teachers. I like that most of the on-line tools do not have ads. I dislike that there are add-ons that have to be purchased on certain on-line tools. I dislike that some on-line tools such as Google Slides do not have very many options for creativeness.
