

Mini-Lesson 1

Fourth Grade

Small group: 3-4 students

BeeBots and Code-a-Pillar

Students will learn to give directions that are specific and also get practice working in a coordinate plane. The BeeBots in particular will be useful in getting kids to write down the sequence of directions they want to give to the bot, and it moves a measured amount for each time so it should be able to move all over the coordinate plane and remain within the spaces provided for it.
