Type(s) of Software:
This is a discovery learning tool because it is an exploration app and could possibly be a drill & practice tool as well depending on what students already know.

Curriculum(s):
This app is definitely Science focused as the primary purpose is for Earth, the sun, other planets, the moon and space discovery.

Cost:
Free

Software Evaluation:
This app is an excellent app for finding out new and exciting information about our planet and solar system. This app offers photos and videos along with descriptions and explanations new and important discoveries. These photos, videos and stories are provided by scientists through satellites.

This is such an awesome app for students to see what else is out there. Students seem to always be so limited to their city or town. It's important for them to know that there is so much more beyond our world. The app navigation is simple and colorful. The pictures and videos are astonishing and the descriptions are insightful.
