Version: 2.4.1

Publisher: DK Pictures, Inc.

Target Audience: Ages 4 and up

Use in curriculum: Science, Social Studies, Math, Technology, Writing, Art

Cost: $2.99

Description of the software: "Making videos with Green Screen by Do Ink is fun, and you can use it to make movies that entertain and amaze. But there are loads of practical uses for this app, too! Use it to explain ideas visually, to make more compelling presentations, to tell stories that engage your audience. Whether it's for fun, for

school, or for work, Green Screen by Do Ink makes it easy to express yourself in a fun and captivating way."

Personal review of the software: We love this app! We see so much potential in it and know it will be so easy to integrate into any subject area. It allows the user to Google any image and then use that as the background. This allows for many different scenes and think it would be such a cute idea to get young kids behind the camera. We think parents would also love to watch these fun, educational videos created by their children. While there were some tricky parts (such as sometimes having an error with sound or a background image), we believe we would be able to fix those issues by putting "x" where students should stand. This will help students be close enough to be heard while still being in the shot.

Does it pass apps: Yes
