

Evaluation Write Up

By Megan and Peyton

Title: Explain Everything

Version: 5.3.7

Publisher: Explain Everything sp. Z o.o.

Target Audience: 4+

Use in curriculum: This app could be used in a group discussion when planning out thoughts or ideas. This could also be used during games in place of the small physical chalkboards that have been used in the past.

Cost: Free, \$107.99 annually for the paid version.

Does it meet APPS: Yes

Description of the software: explain everything is an interactive whiteboard that allows collaborations with voice chats, timelines editing, and advanced recordings. You can include media from the internet, iCloud, drobox, or OneDrive.

Personal review of the software: The app is very broad and can be used by any individual. With so many different functions students could use this app in many ways. We really enjoyed how easily students could collaborate with one another. We felt like the option to include things from the internet or iCloud was nice and would make this easier for us to use in a younger classroom! We could download the appropriate content onto the iPad before class and allow the students to use the app with only that specific folder in their cloud.
