

Evaluation Write Up

By Megan and Peyton

Title: Mimo

Version: 3.20

Publisher: Mimohello GmbH

Target Audience: Children 4 and up

Use in curriculum: You could use Mimo to help children further develop their understanding of content. In order to move on to more fun activities you would have to pass the first activity to move on. The app is very child friendly and has useful information to teach a child about coding.

Cost: \$9.99 a year or \$2.50 a month if bought for a year in full

Does it pass Apps: Yes

Description of the software: Learn to code, make apps, games, websites, automate your life, and much more. Mimo creates a

personal learning path of fun and effective exercises, projects, and challenges that fits into your daily routine and keeps you motivated.

Personal review of the software: The app seemed to be useful, but it was hard to tell from the lite version. The app does offer certification of completion after each section, which is a fun incentive for students to pass the quizzes! We think the fact that the app has the option for students with little experience, no experience, or a lot of experience is really great for use in the classroom! This allows students to build on their personal skill level and not feel behind or bored!
