

Title: Comic Mania (tools)

Version: 1.0.2

Publisher: Exevio Ltd.

Target Audience: The intended audience for this app is children 4+, but it may be better for slightly older students so they can actually write phrases or sentences in the comics. Younger children won't be able to form main ideas or sentences to include in the comic.

Type of Software: Comic Mania is a tools software because it allows you to create a specific desired file, which in this case is a comic strip.

Curriculum: This app could be used alongside any curriculum to enhance the lesson. Since the app is just a customizable comic strip, it could be used with any subject. The teacher could teach the students new content and check the student's comprehension by having them create a comic based on what they learned. This is a fun, but effective way of assessing their learning.

Cost: This app is completely free. There are also not any in-app purchases, which makes it great for younger students to use because it is free.

Software Description: This software allows the user to create/customize a comic strip for anything they desire. There isn't a lot of customization allowed (there are always 6 frames and 9 character spaces), but this is perfect for younger students. The user won't have to worry about creating frames and adding characters because the basis for the comic is already there, they just have to choose which character they want from a list of characters. The app is fun and simple for the user.

Software Impression: Our impression of the software is that it was very easy to learn and use, and it would be very helpful to utilize in the classroom. This app was kid-friendly and didn't have a lot of distractions for the children. We really liked how this app could be used as a formative assessment to check how well students understood the lesson, while still keeping them engaged. I feel like students will enjoy making a comic way more than just taking a paper exam or quiz, so this app is perfect for that.

Does the app pass? Yes.
