

Title: QR Reader

Version: 7.5

Publisher: TapMedia Ltd

Target Audience: The app is targeted for ages 12 and up, although we feel that ages younger than 12 could use the app with ease.

Type of Software: The QR reader app is a Tools software because the user is using the QR reader to find out any information.

Curriculum: Once students learn more about how to use a QR reader/scanner, the app could benefit the students in many ways. We do believe that there is not a specific curriculum that ties into the app.

Cost: The app has a free download that has access for scanning QR codes, barcodes, puzzles, and documents. There are in app purchases that are available. The QR Reader Pro is a one-time fee of \$2.99. There is also a Data Base Scanner for \$0.99 a month, and a Tap Media Pro subscription for \$1.99 a month. The QR Reader Pro gives access to more applications for the software and the Data Base Scanner subscription gives access to a database scanner.

Software Description: The QR reader app has access for scanning QR codes, barcodes, puzzles, business cards and documents. There are many features available through in app purchases and monthly descriptions. The app is really easy to use and easy to navigate.

Software Impression: The software is really easy to use and pretty self-explanatory. The app does a pretty good job at scanning, but as far as being a good resource in the classroom for students, it doesn't allow much curriculum learning. There are a couple things that the students could use this app for in the classroom but not for younger elementary students. We feel that students could use this app, but teachers could benefit more from it.

Does the app pass? Yes
