Title: R-Controlled Vowels
Version: 1.1
Publisher/Producer: Brittany Mclaughlin
Target Audience: 2nd Graders
Types of Software: Educational-Language Arts-Phonics and Word Recognition

Curriculum(s): This app goes perfectly with the Phonics and Word Recognition standards regarding r-controlled vowels. This app could be used to practice their r-controlled vowels in class and even at home!

Free Version: This app is free!

Description: This R-Controlled Vowel App is a free app with no monthly subscription. This app is not over the top or extravagant, but it does serve its purpose. On this app you have the options to choose from sorting sounds or building words. When sorting sounds, you have prompts to sort words into short A or AR sounds. You also have the option to listen to the words. The building word section gives you a variety of letters and AR sounds and lets you build words and then listen to them.

Impression: Considering this app if 100% free, I am very impressed. Yes, this app could have so much more potential but if that were the case then the app would have some type of cost.

Disagreements: None.
