

## Padlet

Padlet can be used in many ways in a classroom.

1. Padlet can be used for students to upload projects, school related documents, and assignments. This allows parents to see what their child has done. By using this tool, parents will stay informed on what their child is doing and allow them to view their progress.
2. It can also be used to share lesson plans. Lesson plans can be uploaded and quizzes and activities can also be shared.
3. Padlet can also serve as a website for teachers. It allows you to upload links to other websites, videos, and other useful information.

## On-line Tools

With on-line tools, I have found that there are many different ways to integrate and incorporate technology into the classroom. All of these tools will benefit me as a teacher. I prefer each of the tools that I listed and described. These tools will help me, my students, and their parents. I will be using all of these tools in my classroom.
