

Code Karts

Version 3

Edoki Academy

Target

Audience: The publisher says that this app is for kids ages 5 and under. We also agree with the publisher's statement, but we also think that this app could be used for children up until 3rd grade instead of just age 5.

Curriculum: This app fits into the curriculum because it teaches children how to use coding to solve a problem.

Cost: The app is free to download. Once you get passed level 10 in the app, you have to pay \$2.99 to have access to the next 70 levels.

Description: Code Karts is an app that decodes while playing a "game" of go karts. The go kart will only make it to the finish line if the user uses the right code to get it there. Whenever the code is guessed wrong, the go kart will crash, and you have to start the level over.

First Impressions: We think this app provides a great tool for children to learn how to decode. The app ties in the go kart game so well, that the user does not even recognize that they are coding. With the fun and inviting sounds and visuals, the app is enhanced. We would both like to implement this app into our future classrooms.

Pass: Yes
