

# Kids Planet Discovery!

Version 3.9.1

*Planet Factory Interactive, S.L.*

## **Target**

**Audience:** The audience is for ages 4+ and ages 6-8. We agree.

**Curriculum:** This app can help improve someone's educational abilities in history and geography.

**Cost:** it is free to download, but when in the app, you have to pay \$1.99 for every other section to access it. Only one section is free.

**Description:** This app lets kids have fun through little games and activities while they learn and discover the world. The app sends them to places around the world and uses a game to help them figure out what belongs in each country.

**First Impressions:** This app was really cute at first, and I thought that it could really help students with their history and geography skills, but after looking at the app for a while and digging in deeper, it really is pointless unless you buy the full app as a whole. I would not use this in my classroom.

**Pass:** yes, but not for me.
