

Padlet

Version 83.0

Wallwisher, Inc

Target

Audience: This app is definitely made for older students and adults. The publisher does not have a recommendation of ages for the app.

Curriculum: Padlet is an app designed to create projects for educational purposes that you can share and collaborate on.

Cost: The app is free to download, but for the pro plan per month, it costs \$8.33, and for the pro annual plan, it costs \$12.99.

Description: The educational focus of this app is to let users post on a “bulletin-board” type of wall whatever they would like. This could be used to projects, assignments, or note taking. This is a great tool to use for a child’s development and learning. You are able to post whatever you want and look at anyone’s work that is shared with the public. You are able to use your skills to your ability.

First Impressions: As a teacher, this app would be useful to post homework assignments or notes for the class. Kind of like a discussion board. We think this app would be handy and useful for older students, but it would be harder to use this app to teach elementary students. We will not be using this app in our future classrooms.

Pass: no
