

Mini Lesson: 6

Grade: 3

Curriculum: AR.Math.Content.3.MD.B.3: Represent and interpret data.

Tools: The use of Spreadsheet will integrate into a lesson to represent and interpret data and show comparison. Students will be able to view this on the Smart Board.

Synopsis: For the introduction, I will show students a template on spreadsheet to demonstrate represent and interpret data. For the instruction, the students and I will use the smartboard and spreadsheet to create a spreadsheet to show a comparison. On one worksheet, we will have information from Target. One from Kroger, and the last worksheet from Wal-Mart. The fourth worksheet will contain data from the other three worksheets and compares the data. Students will come up with five items that they would like to compare. After finishing the Spreadsheet, students will be sent home with an access code on the class website to fill out a template at home.
