

Mini Lesson: 1

Grade Level: Kindergarten

Curriculum Topic: K.OA.A.1 – Represent addition and subtraction using objects, fingers, mental images, drawings, sounds (e.g. claps) acting out situations, verbal explanations, expressions, or equations.

Tools: Students will use their iPads to access WipeBook for the instruction part of the lesson. I will display the lesson on the Smart Board.

Synopsis: WipeBook can help in the classroom by giving students the opportunity to use whiteboards in a lesson. For the introduction, students will watch a short video about adding and subtraction. I will introduce them to addition first and we will start off by adding by ones. For the instruction section, I will display a problem on the Smartboard. Then I will tell students to use their iPad and access WipeBook to work out the problem. After giving them a minute or two, students will then flip around their iPad and show me. When doing math, students will access this program and show me the answers and quickly wipe them away. This will allow us to get more practice in, create a fun activity, and keep students engaged. For the conclusion, I will explain the classwork. Students will fill out the worksheet that adds by ones. After giving students ten minutes on the questions, we will go over the answers.
