

Targeted Grade Level: Second

Subject(s) Focused On: Graphs & Math

Tools Used: Google Forms and Excel

Synopsis: I will provide my students with a link to a google form that has one question on it. The question will be "What month is your birthday in?" During class, they will all follow the link to the form, individually. The class will then calculate the results of the form to see which months have the most students born during it. After adding them all together then as a class, we will make a table to visually and accurately represent the data.
