Title: TerraGenesis-Space Settlers

Version: 5.20

Publisher/ Creator: Tilting Point LLC

Target Audience: Any student in science who thinks it would be fun to create a planet from scratch

Types of software: Problem Solving because you are given a dead planet and have to work through ways to make it a thriving planet. Along the way you might not know what you are doing correct or not.

Curriculum: This would work in our science classes when learning about the solar system and components of the Earth.

Cost: Free with In-App purchases which include: buying currency in the app to buy materials and research

Description: This app uses real science from NASA to build life on dead planets. You can do that as well as discover planets and moons, defend from asteroids, and even has biosphere simulator.

Impression: We thought this was a very interesting app. It has a creative spin to learning about elements of a planet and within the solar system. It was more of a game to play at home, rather than in the classroom.
