

Cue!

Teacher: Ms. Maggie Schreit

Grade: 4th

Tools: Cue and Microsoft Excel

Lesson:

For this lesson, I will show the students Wonder Workshop's Cue toy. I will explain to them what the toy does and let them play with Cue. After they get used to how the toy works, the students will be assigned into groups. Then, the students must work together in groups to come up with different ways kids could use Cue for school, fun, or anything else.

Students will use Microsoft Excel on the iPad to jot down their ideas. After they are finished coming up with their ideas, each group will present those ideas to the class by using Cue. Throughout the assignment, I will be going around the room to ensure all students understand what I expect them to do. Students will be in groups of 4 or 5. There will be one group speaker.

Modifications:

Students with modifications will be sat in the front during instruction and also in a smaller group to ensure they are understanding the instruction.
