

Clock Time

Grade Level = 1

Clock Time = mathematics and clock identification

Objective of the lesson is for students to be able to identify features of a clock. Counting and distinguishing between hours and minutes will be part of the lesson.

Each student will be provided a clock for exploration. As a class we will discuss what we see and name the parts of the clock. Each student will pull out their iPad and watch a Brain Pop Jr. video on the parts of a clock.

<https://jr.brainpop.com/math/time/partsofaclock/>

After the video I will have an already created PowerPoint on the basic concepts of a clock and how to tell time. This will be projected on a smartboard.

After the PowerPoint is reviewed students will complete a test via Socrative and the teacher can monitor the students answers and see if the students have been paying attention and where struggles may be occurring.

Technology Tools

BrainPop is an app that users can watch educational animated videos on. Easy to navigate and encourages critical thinking skills. Annie and Moby are characters that guide users through each topic. Games and quizzes are also available in this app.

PowerPoint

Socrative is an additional app where quizzes can be created, and immediate feedback is provided. Useful in assessment as well.
