

Where in the World is Arkansas

PowerPoint, Where in the World is Arkansas, will help students identify geographically where the state of Arkansas is on the Map. Furthermore, this can lead to identifying where the capital of Arkansas is located. This can lead to a conversation of what activities occur at the Capital and in Little Rock. Students can then identify where they live in the state of Arkansas. This PowerPoint can be embellished even more to identify all states and lead to locating state capitals.

Dinosaurs

I have created a PowerPoint of dinosaur pictures. This activity can lead to distinguishing the differences between the various dinosaurs and preparing students for a picture identification quiz. Furthermore, students could be put in pairs and each pair given a dinosaur from the PowerPoint and they have to research their dinosaur and present their findings.

Goodnight Moon

Goodnight Moon, PowerPoint is more for a younger group of children, but it could be used to identify colors and shapes on the vivid pages. Also, it can help with word identification and association. Students can talk about their process for going to bed and share with the class. Do they have an evening bath. Read a bedtime story. Etc.
