

**Title:** QR Reader

**Version:** 4.4 (one of a series)

**Publisher:** TapMedia Ltd.

**Target Audience:** The target audience of this app is for users of all ages. This app allows users to use as a tool as well as have the ability to create their own QR code.

**Curriculum:** This app could fit into the curriculum of a general education classroom because it focuses mainly on the use of technology and engineering since it is an app that create QR codes to direct to a website, phone number, text, location, or email.

**Environment:** The possible environment for this app would be in the regular classroom and teachers could use this app within a lesson plan. After introducing a new concept to students, the teacher could instruct the students to use this app as a way of assessment. Students could create their own QR code and have it direct to a website they have found that relates to the recently learned content.

**Cost:** This app is completely free! I believe this app is free because TapMedia Ltd. has allowed easy access for users to choose their app over others since it is free. This app can be used as a tool which is highly efficient within the 21<sup>st</sup> century and its advances within technology. There are no in-app purchases that might cost the user to pay a certain amount.

**Description of Software:** This software is set up to be used as a tool. Since today's society is so advanced with technology, this app can be used daily. This app does not use any sound effects or social/cultural bias characters. This app is simple and self-explanatory for users. This app only has a minimum of different types of QR codes it can create allowing the user to not feel overwhelmed by multiple options.

**Impression of Software:** My impression of the software is an excellent one because it is easy to use and not challenging. As a future educator, I feel as if I could implement this app within my classroom. After teaching my students a new topic, I could allow them to find a classmate. The two classmates would then work with one another to find a website that relates to the topic the just learned. The two students would then make a custom QR code using this specific app the can direct viewers to their chosen website. There are many good aspects of this app that include being easy to navigate and does not include an abundant amount of unnecessary tools that are not needed.

**Pass:** This software passes the evaluation due to the well-made aspects of the app as well as the fact that it is user-friendly.
