

## **Khan Academy Evaluation**

Nate Tiner

Khan Academy is an iPad/Apple application that offers tutorials and practice on numerous amounts of study material. This is a completely free application, that all users have access free access to. There is a teacher and student side to this application. On the teacher side, you can set up your whole class on there, just like Google Classroom, and you can even integrate the two together. It is useful because there are premade lessons and examples already loaded in as you set up your class. I would not use this as the main lessons, but I can easily assign homework and quizzes from this application. This would lead to the student side, that can be accessed on an app on an iPad or on any web browser. Students will be able to see anything that the teacher allows them too. I would defiantly utilize this app, especially to assign homework, quizzes and tests, and I would use their lessons, but go more in depth. If a student is struggling, I may also have them view videos that might better explain the content. I might also have students view the videos before lessons at home, so they can already know somewhat how to do problems that we will work on in class. The great part about this app is that you can have different students see different content, based on how well they are mastering the content. It is free and one of the best classroom applications that a teacher can and should utilize. I do wish it had ways to add custom lessons though, but this application is great for both students and teachers.
