

**1.) Name:** Explain Everything

**URL:** <https://explaineverything.com>

**Description:** Explain Everything is similar to Padlet in the sense that it is also a digital graphic canvas used to create, share, and collaborate on projects via iPad.

**How to use:** This would be great to use for meetings when using things like notebook paper, or sticky notes. I think you could also use it in your classroom with students, but it would be more for older students since it is such an advanced tool.

---

**2.) Name:** ClassDojo

**URL:** <https://www.classdojo.com>

**Description:** ClassDojo is a safe and simple communication app for teachers, parents, and students. Teachers can encourage students for any skill and can bring parents into the classroom experience by sharing photos, videos, and announcements.

**How to use:** You create an account and basically can upload material to a safe board where only parents can see what you post. This would be a great tool in younger elementary classrooms so you can send parents pictures and show them what they child is doing/working on.

---

**3.) Name:** Scan QR Reader

**URL:** <https://www.the-qr-code-generator.com/scan>

**Description:** A simple and easy website that allows you to scan QR codes as long as you grant access to the computer camera. A great way to make a book come to life.

**How to use:** Students can pull up this website when doing silent reading time and interact with the book they are reading. We could also use this website as a group, and I could show them different things about the book we are all reading together.
