Title: Boogie Bot

Version: 1.02

Publisher: NybleApps LLC

Target Audience: Ages 4 and up but ideally for kids ages 6-8

Use in curriculum: Math and Technology

Cost: Full version: $5.99; Intermediate Level: $3.99; Imagination Pack: $2.99; Curiosity Pack: $0.99; Expert Level: $3.99

Description of the software: "Boogie Bot is a fun and interactive learning app which will introduce kids to computer programming using Blockly- Google's visual programming language. In this app, kids will program a robot to dance while they learn the basics of coding. Boogie Bot makes learning easy by engaging kids in an

interactive way which will provide creativity as well as structure, both which foster learning."

Personal review of the software: We thought Boogie Bot was a little repetitive from level to level, but thought it would be beneficial for younger students. We think the kids would enjoy and laugh when helping the robot create some fun dance moves. We liked how there was a trial and error process and allowed the students unlimited attempts to fix their mistakes. We believe some students may experience some trouble with the app because of how new the concept of coding would be to them.
