Evaluation Write Up

By Megan and Peyton

Title: Splash Math

Version: 5.5.3

Publisher: Study Pad, Inc.

Target Audience: Ages 6-8

Use in curriculum: The app can be used in classroom as a form of assessment! There is an option for a progress report that can be sent to parents and teachers and can be used to understand where the child is at academically.

Cost: Free, in app purchases available.

Does it meet APPS: Yes

Description of the software: "splash math is a comprehensive and curriculum aligned math program which reinforces math concepts using self-paced and adapted practice."

Personal review of the software: The app offers content for students ages pre-k through 5th grade. The app allows for students to practice above or below their official content area, so it can be specifically suited for their needs. The app also had options for the verbal instructions to be spoken in Spanish for children who speak Spanish as their first language. We feel as if the app could very easily be implemented into a classroom to help students learn on their own individualized level.
