Title: Tetris

Version: 30.15

Publisher: Electronic Arts

Target Audience: 4+

Use in curriculum: This app can teach students to effectively solve problems. Can also be used as a metaphor how small situation can build on each other to cause a larger problem!

Cost: free

Description of the software: Tetris is a game to solve problems in a marathon mode. It is a well-known game that children and adults alike have been playing for a long time.

Personal review of the software: We have both been fans of tetris since we were children! We can think back and remember how fun

and frustrating the game has been to play. In a classroom you can give children this app and allow them to attempt to solve a bigger problem at hand. They could also work as partners to develop their team working skills.
