Evaluation Write Up

By Megan and Peyton

Title: QR code reader/ creator

Version: 2.3

Publisher: Matan Randomski Productions

Target Audience: 4+

Use in curriculum: You could use this to help students access webpages more easily. It could come in helpful when trying to get children with ipads all to the same page without trying to have them type in a URL.

Cost: free, no in app purchases

Does it pass APPS: No

Description of the software: "Create a bar code for your business and personal use for free! QR Code Maker allows you to create barcodes in varying sizes and save them to your photo gallery."

Personal review of the software: We really enjoyed being able to make our own QR codes that we could use in a classroom! We found that while this app may not be useful for the children themselves that it would be useful in many different ways for the teacher. Being able to create codes for the students to scan on their Ipads would be so much easier and more time efficient for teachers than having each child attempt to type in a URL.
