Online Tools

1. Kahoot

https://kahoot.com

- Kahoot is an app where teachers can create quizzes for their students or search for quizzes that have already been created. You need an access code to join, so it is secure and protected. It updates statistics after each question so the teacher will know the percentage of kids who are missing the questions.
- I would use Kahoot to gauge my students retention rates. Because it is set up in a game-like manner I feel as if the kids would be more engaged in the assessment. This could also be used as a review.

2. Canvas Classroom

https://canvas.instructure.com/search/all_courses

- This online tool is very similar to google classrooms. This app allows students to pace themselves and learn at their own rate. Teachers can upload lessons and assignments individualized to the students needs. You can also upload animations, test, quizzes, and other activities. The quizzes will be automatically graded.
- If I were to use this in my classroom, it may be helpful when some students are truly struggling and need some extra assistance while other students are ready to move on with the studies. This allows me to accommodate to both sets of my students needs.

3. Word Art

https://wordart.com/

- Word Art is very similar to wordle, but it allows you to be more creative. For example, you can create the word clouds in many different shapes and sizes.
- I could use this in my language arts lesson plans! Students could use this to retell a story, practice using descriptive words, and to overview the main characters and plot of a book !
