

## Evaluating Apps

- **Title:** Prodigy
- **Version:** Only one
- **Producer:** SMARTTeacher Inc.
- **Target Audience:** Everyone
- **Types of Software:** Drill and Practice (you practice math lessons already taught with a game)
- **Curriculum:** Math only
- **Cost:** Free
- **Description:**

You create an account and then create your character. You start at level one or the first part of the world is how they have it laid out. Then you are asked multiple choice math problems that you have to solve before you can move on. You rescue pets, play with friends, and battle "bosses" by answering math problems correctly. This game changes with the seasons so right now they have a Halloween theme. The graphics are awesome, and colorful, and are appealing to the eye.

- **Impression:**

This app is very impressive and can turn boring math into something fun. It can make students want to learn math just so they can continue through with the game. I also like that it is free but you have to sign up for an account which is a great way to keep up with your previous work. The math problems are based off of grade level curriculum that you choose, so it is tailored to what you need. So the students can use this year after year. There are over 1,000 skills to be used with this app. This is a top notch way of making make more enjoyable and getting students to strive for those educational goals.
