AR Coding Kodabl

Version: 1.0.2

Publisher: Valeriy Danyuk

Target Audience: This app is designed for ages 6-8.

Curriculum: This app can be used to integrate technology into lessons by learning coding.

Cost: The app is free to download. You can purchase an all access pass for $2.99.

Software description: This app is a visual programming app for children. They can improve their logical thinking skills. The student has to create a sequence of commands and implement them using reality cards.

Impression of software: We didn't care for the product by any means, however perhaps this is on the grounds that we had no clue how to utilize it. There were no useful guidelines and we were confused on how to make sense of utilizing this application. It appears as though it would be a decent application on the off chance that we made sense of how to use it.

Does it pass? No this app does not pass the evaluation.
