
Splash Math

Version: 5.6.1 (one of a series)

Publisher: StudyPad, Inc.

Target Audience: This app is for ages 6-8.

Curriculum: This application fits into the curriculum of a regular classroom since it centers around mathematical concepts. Depending upon the grade level chosen, the student can work on the math concepts that they are working on in their specific grade..

Cost: This app is free to download. There are also additional versions of this app that can be purchased in the App Store depending upon the grade.

Software description: This software is set up like a game that allows children to work through math concepts at their own pace. This app is set up to where the student/teacher can choose a grade level and then they are directed to different topics that goes along with that specific grade level.

Impression of software: We both really enjoyed this app because it was easy to use and was very engaging to work with as well. There are many good aspects within this program such as the navigation being simple and easy for young users. This app does very well with providing multiple subjects for each grade level and does not use unnecessary topics.

Does it pass? Yes, this application passes the evaluation.
