Curriculum: This app is for math drills and practice where students can practice multiplication and addition.

Cost: Free to download

Software description: This is a drill and practice app used for practicing addition and multiplication. There is a monster that gives you numbers. Then number around the monster's neck is the end product that you are trying to get to. You must use the numbers that are given to you to get the end product. You earn stars and trophies for the amount of problems you get correct and complete levels. The problems also get harder as the student progresses through the game.

Impression of software: This app so many fun details that are very intriguing and kid-friendly. This was such a fun game to practice addition and multiplication. The only thing we did not like was that it was only for practicing addition and multiplication, so this app could either work for young students learning addition or older students learning multiplication.

Does it pass? Yes, this app passes the evaluation.
