
Swift Playground

Version: 2.2

Publisher: Apple Inc

Target Audience: 4+

Curriculum: This app can be used to teach students how to code.

Cost: Free to download.

Description of software: The software uses built in lessons to teach kids how to code.

Users start with the interactive lesson, Learn to Code 1. Then they can move onto Learn to Code 2, etc. The user also has the option to create his/her own playground.

Impressions of software: We were very impressed with this app because it gives you step by step directions on how to code in this app. Other apps similar to this one are so broad that it was hard to figure on how to start. This app was also very easy to navigate. The interactive lessons will keep students engaged and will allow them to have fun learning to code!

Does it pass: Yes, this app passes!
