

Money!

Subject: Mathematics

Grade: First

Tools: [Counting Coins](#) and Powerpoint

Synopsis: In this lesson, we will be learning the value of a penny, nickel, dime, and quarter & counting collections of coins. We will first start out with a PowerPoint that I have created on the smartboard. Each slide will cover each coin and the value of the coins. After going over the values of the coins I will switch over to YouTube to watch a video about counting coins. After the video, I will go back to the PowerPoint to the last few slides that will include a group of coins and as a whole my students will determine the value of the total amount of money. Each slide will consist of a different amount of money. Students will be doing this as a whole and should raise their hand whenever they know the total.
