

FIVE LITTLE PUPPIES

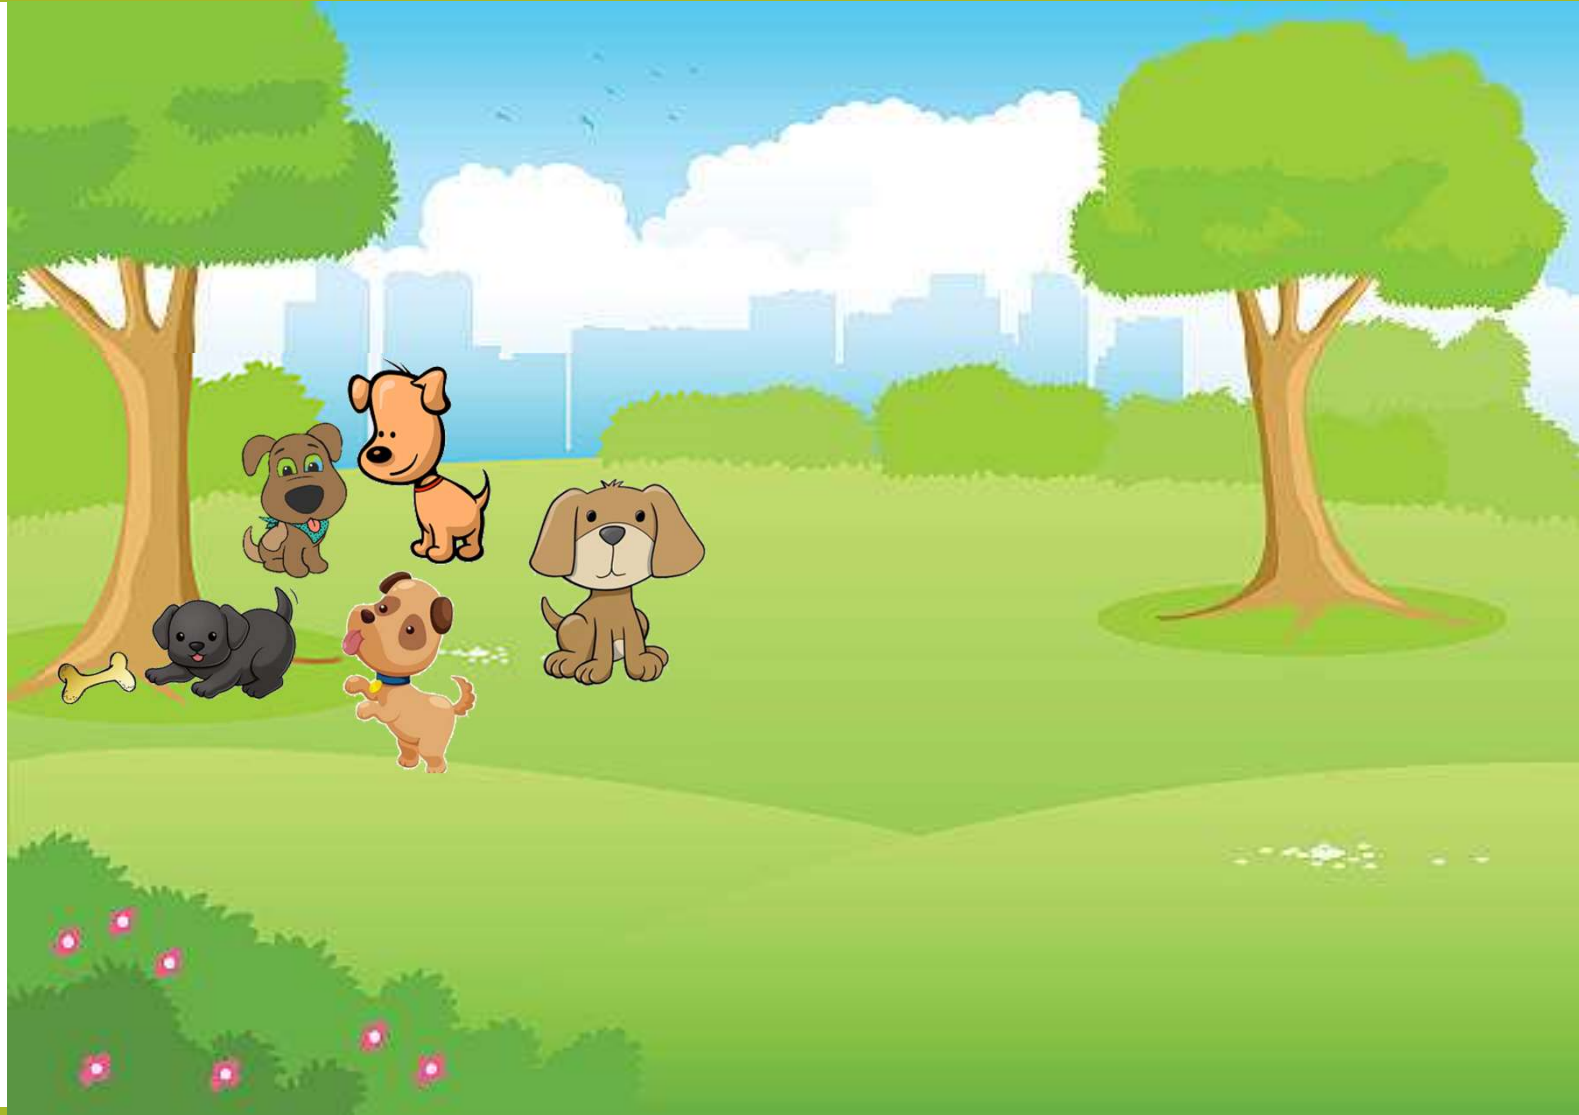

Sydney McClung

Once upon a time there
were five little puppies
playing in a park.

While the puppies were playing, they noticed a bone laying under a tree.

"Maybe since there is one bone here, there will be more bones here too!" one of them said

The puppies began looking around to find more bones.

To their surprise they found another bone, giving them two times the amount that they had before.

How many do they have, if they have two times the amount from the last page?

$$2 \times 1 = ?$$

Two bones

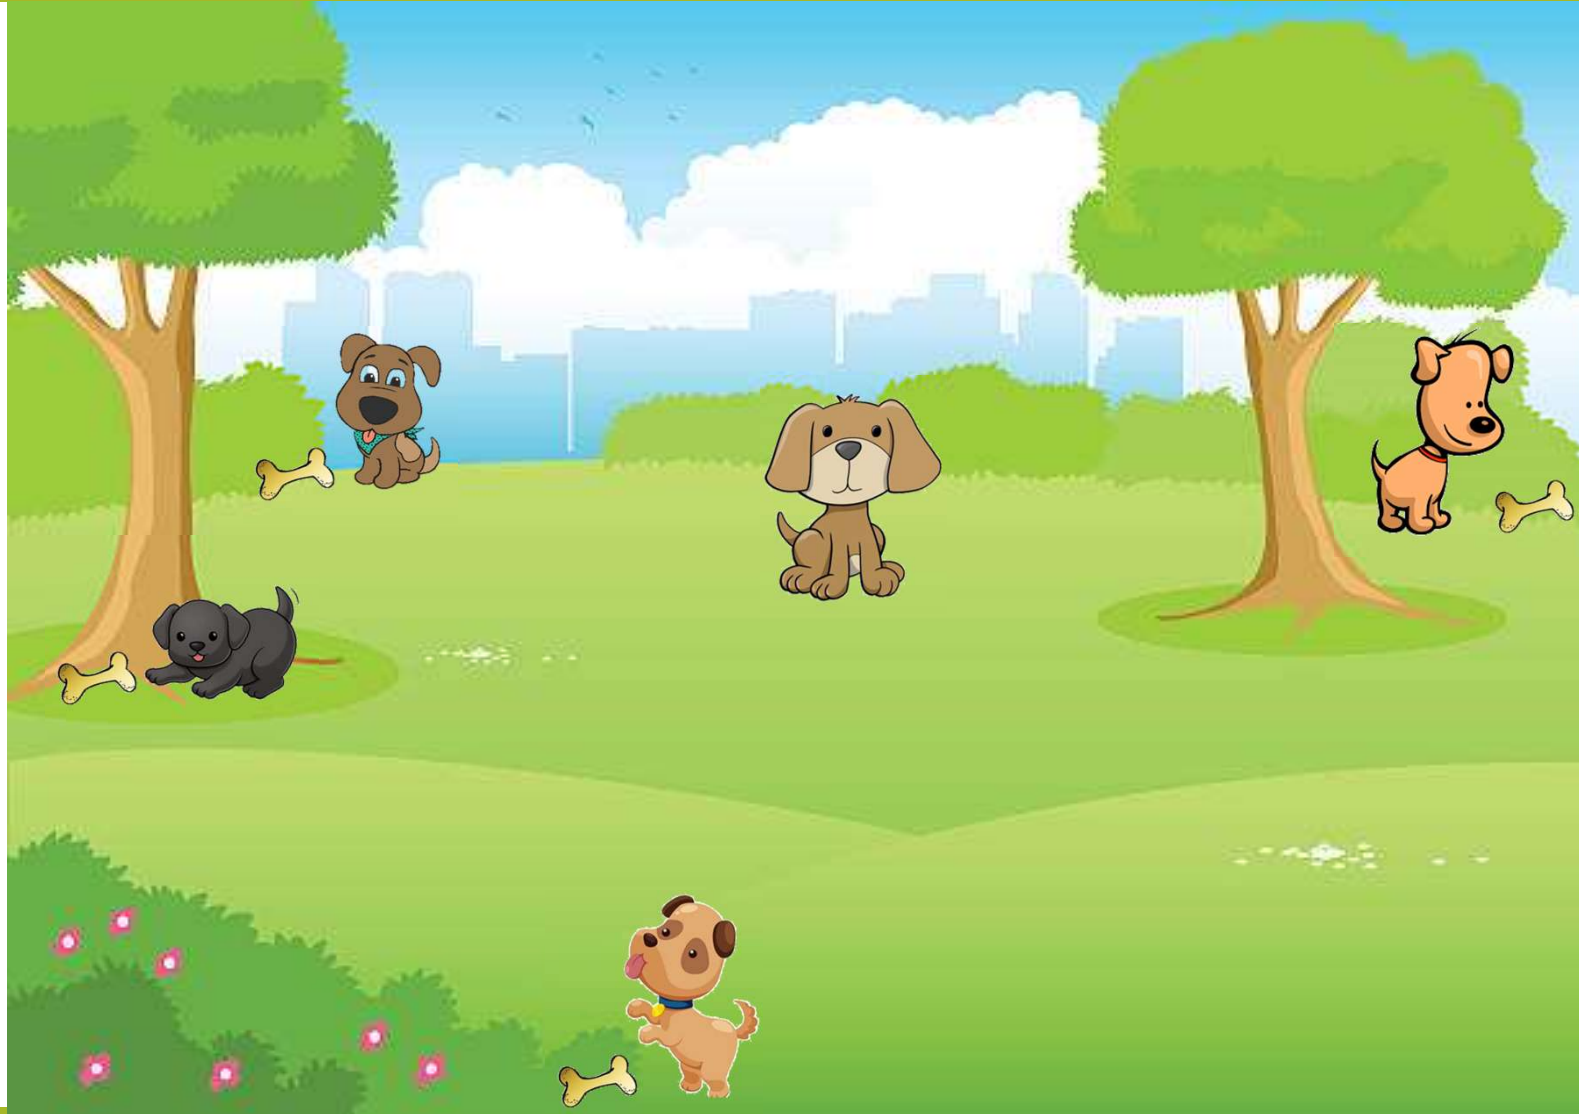

Once again they found
two times the amount
of bones that they had
before!

How many bones do
they have now?

$$2 \times 2 = ?$$

Four bones

Again they found two times the amount that they had before!

How many do they have now?

$$2 \times 4 = ?$$

Eight bones

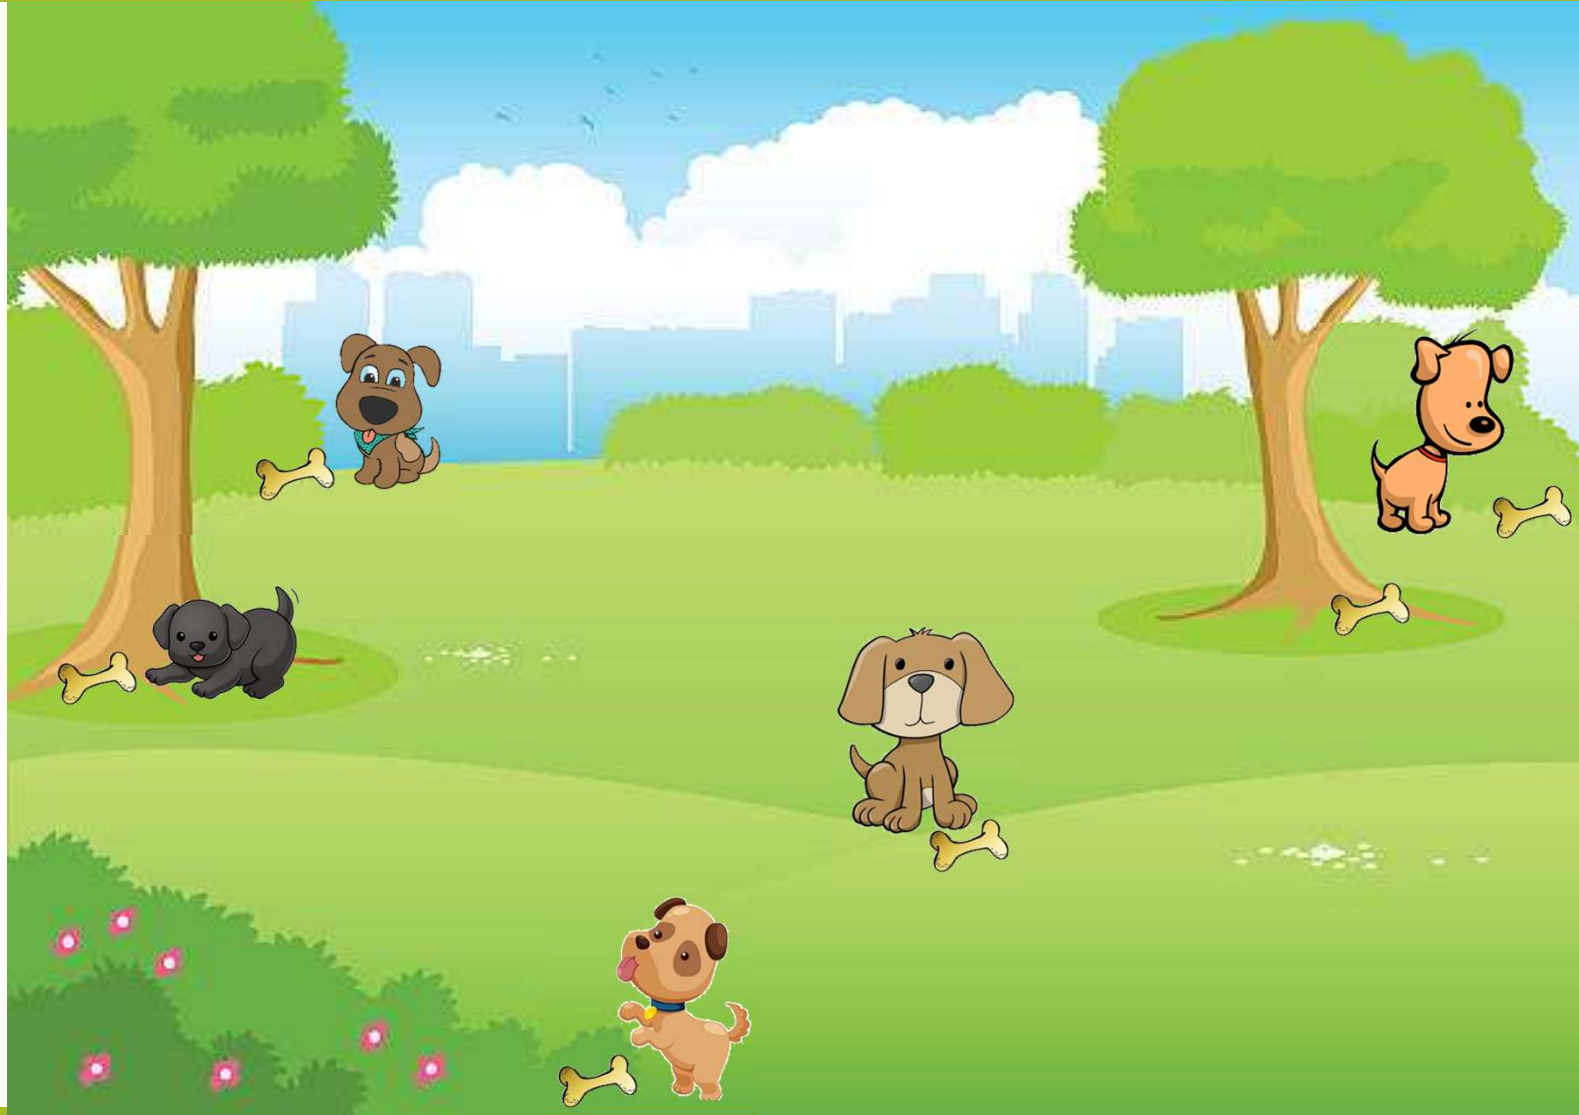

"Wow we found so many bones here today!" says one of the puppies

How many bones did the puppies find total today?

Eight bones

After a long day of searching for bones, the puppies were very sleepy so they decided to head home for the day.

“Today was such a fun day,
lets go on a bone hunt
together again some day!”
said one of the puppies

The
End
