

Part 1 Breakdown:

This story board was submitted via blackboard as well. This was created using Story Board That. <https://www.storyboardthat.com/>

I used iMovie for the video section. I love this program because it has a lot of effects and I am familiar with it. It has great music options and allows me to crop each clip. I also love the voice over effect. There is nothing I really dislike about this app; I think it is really versatile but I wish you could screen record on it.

Part 2 Breakdown:

For my how-to I am teaching students how to join the Classroom Dojo. This was created in the last project and will be used in the classroom to keep track of student's behavior. Each student must accept the invitation for me to keep track of their points. I would send this video home so students and parents could join the classroom.

I used clips for this portion. I thought clips was really simple which made it easy to use. I wish it had more effects and the ability to voice over. I like the stickers and emojis because that would make it more interesting for students. I probably wouldn't use this again because I prefer iMovie.

Part 3 Breakdown:

This is an example of something my students would create for me. In social studies we are learning about cultural differences in one another's family. The students are also practicing

presentations, so they are to research their family and make a video about their culture to share with the class.

I used iMovie and uploaded to YouTube for this section. I used iMovie for the video section. I love this program because it has a lot of effects and I am familiar with it. It has great music options and allows me to crop each clip. I also love the voice over effect. There is nothing I really dislike about this app; I think it is really versatile but I wish you could screen record on it.
