

Technology as Communication

Technology in the Classroom

In my classroom technology will be used to increase communication between my students and I, and the parents of my students and I. This will be done through a variety of software and apps that will always be available. Newsletters will be sent home monthly digitally and physically to keep parents in the loops about upcoming events and important information.

The Good and Bad of Technology

Positives	Negatives
Better Communication	Unconnected in real life
More Resources	Potential Danger
Provide more ways of expression	Can cause you to feel like you shouldn't ask for help
Allows all people to have a voice	Fails or will shut down

How I will make technology safe

Technology used incorrectly can be dangerous. To make technology as effective and safe as possible there will be restrictions. I will have specific ways and resources that students can use for communication. This will limit the amount of bad sites that can be dangerous or harmful.

Communication

- ★ Email
- ★ Messaging Apps
- ★ Google Classroom
- ★ Remind Text Messaging
- ★ Zoom, skype, video apps
- ★ Classroom Management Software
- ★ Personal Website
- ★ Google Docs

How can I use this?

As a parent, making sure there is communication and involvement with the school is important. There will always be a way to clear up any questions or concerns that you may have as a parent. Signing up for the Remind messages will keep you up to date on events or homework assigned. Using any of the above communication methods, you can always schedule an appointment to come meet with me!
