Science Experiments in school lab-Learn with Fun Evaluation

3/11/21

This discovery learning app is called Science Experiments in School Lab-Learn with Fun. I believe this app can be used for 6th graders who are interesting in cool experiments, alchemy, and chemistry. This app can be fun to use for the student's free time because they will be learning what they are interested in. If the teacher wants the students to start being interested in Chemistry then this app may be an easy way for them to learn basic combinations. I do not think this app should be used for educational purposes but to help students become interested in subjects that they might find boring. This app is only available for android devices.

The free app, Science Experiments in School Lab- Learn with Fun was created by the company Rolling Panda Arts. This app has ads that play after completely certain goals. It had calming music that complimented the game style. The app was easy to use and navigate. It also gave basic responses if you got the wrong answer on one of the problems. However, it does not tell you the right answer. I believe that this app can easily allow students to absent mindedly play. There were in app purchases such as buying hints and removing adds.
