App Evaluations

Title	Padlet
Version	96.0
Publisher	Wallwisher, Inc.
Target Audience	4+, in our personal opinion we think that it should be for upper level elementary grades. The app allows internet access so it needs to be monitored by a parent or teacher, and student needs to be responsible enough to access the internet.
Types of Software	We both agreed that the type of software used is tools. We chose tools because Padlet is a app that focuses on creating a digital canvas that can be used to present work or collaborate on.
How software fits into curriculum and classroom environment	In the classroom, the app Padlet can be used in the classroom to create individual documents over a specific topic. Students can individually use Padlet to create a presentation that they will later share with the class.

App Evaluations

Cost	This app was free to purchase, but once in the app there are multiple in-app purchases and a $8.33 monthly subscription. With the free app, users only receive three padlets, 10MB files and standard support. A monthly subscriber would receive unlimited padlets, 250 MB files and priority support.
Software description	We choose tools as the type of software. Tools is any type of software that lets the user create a type of file.
Possible Implementations	As teachers we can use Padlet in our classroom to create lessons on, or have our students create "mock lessons" to present to their class.
Does the software pass APPS?	We both agree that this app passes our standards, although we agree that another app (notability) has many of the same features and works much better.
