

I-Movie Document

For my integrated movie, I choose to use i-movie. Throughout a large span of my life, I have used apple products, so using i-movie for my integrated movie was an quick yes for me. I enjoy using i-movie. I love how you can upload both pictures and videos all to one project.

I would defiantly use i-movie again to create a project.

Using video in a classroom setting can help build a better classroom understanding for proper use of technology. Students can use video in the classroom to create presentations (like I am doing in my integrated movie), they can use it to create rap videos teaching a lesson, they can create visual representations of a how to project, or videos of pictures and videos of a specific trip or specific span of time.
